

Not Sure About The Covid (SARS-CoV-2) Vaccination?

Some have already taken the first and second dose of Moderna (Mod) and Pfizer–BioNTech.(PBNT). These people have now been introduced to the SARS-Cov-2 through a spike protein and we trust their body will be able to mount a healthy immunity to it. But what else will it mount an immunity to? Read on.

But many more are still in line to be vaccinated!

For those still considering, are you wondering how safe a vaccine is that has only come online after nine months of testing, when other vaccines are put through much longer test periods (with the shortest being four years) before being released to the public? With such a short testing period the manufacturers can only project the long-term effects on your body and they don't really know.

All previous vaccines are DNA based. Are you concerned that, **for the first-time messenger RNA (mRNA) is the vehicle to introduce this virus into the body** of those receiving Mod's and PBNT's vaccination?

Are you aware of the function and instability of mRNA? Are you aware that mRNA vaccines are technically not vaccines but genetic modifiers? Which of your genes will it be modifying? Are you aware it has recently been revealed that, "RNA has a direct effect on DNA stability?" See [here](https://tinyurl.com/b9a4wccx): <https://tinyurl.com/b9a4wccx>

Are you concerned that routine flu viruses could much more likely injure or kill you after you've taken the second round of the Covid injection? See [here](https://tinyurl.com/ypjz2t8f): <https://tinyurl.com/ypjz2t8f> Consider the proof that the Covid vaccine was started and cultured with **aborted fetal tissue**. See [here](https://tinyurl.com/4unzf3sr): <https://tinyurl.com/4unzf3sr> Consider where this doctor warns that the depopulation program of mRNA will begin 3 to 5 months after injection. See [here](https://tinyurl.com/nwy9bk74): <https://tinyurl.com/nwy9bk74>

Does it concern you that an otherwise healthy pro-vaccine, 56 year old, Dr. Gregory Michael of Miami Beach, FL, died January 3, 2021, 16 days after receiving his PBNT Covid vaccination? His wife said in a text message to The New York Times that Michael "Never had any reaction to any medication nor vaccines." See [here](https://tinyurl.com/y4sklzy8): <https://tinyurl.com/y4sklzy8> Or that according to Intermountain Healthcare doctors in Utah, women who take the Covid-19 vaccines are showing symptoms of breast cancer? See [here](https://tinyurl.com/5ec7789y): <https://tinyurl.com/5ec7789y>

Does it concern you that there had been no Covid deaths in any nursing home in Cayuga County, NY prior to December 29, 2020? Seven days earlier (Dec. 22, 2020) one nursing home in the county, The Commons on St. Anthony, started vaccinating their elderly residents for Covid. Since December 29, 24 residents of The Commons have now died. See [here](https://tinyurl.com/y2r7569c): <https://tinyurl.com/y2r7569c>

Does it concern you that twenty-three people died in Norway within days of receiving their first dose of PBNT's vaccination? See [here](https://tinyurl.com/y63z9k39): <https://tinyurl.com/y63z9k39> Does this young woman's convulsive reactions to the Moderna shot concern you? See [here](https://tinyurl.com/y365sbql): <https://tinyurl.com/y365sbql>

Are you concerned that MLB baseball star Hank Aaron passed away 17 days after receiving his Covid-19 shot during a high pro-file publicity stunt? See [here](https://tinyurl.com/yydrxlqc): <https://tinyurl.com/yydrxlqc>

Are you concerned when you read that the Covid injection, "...contains a spike protein called syncytin-1, vital for the formation of human placenta in women. If the vaccine works so that we form an immune response AGAINST the spike protein, we are **also training the female body to attack syncytin-1, which could lead to infertility in women of an unspecified duration.**" And that the former director of respiratory research for Pfizer, Dr. Michael Yeadon, in December 2020, called for the immediate suspension of all SARS CoV 2 vaccine studies. See [here](https://tinyurl.com/2umq52b9): <https://tinyurl.com/2umq52b9>

Are you concerned that under 42 U.S. Code § 300aa–22 (b) (1) neither Pfizer or Moderna can be sued if you have severe side effects to the vaccine and the government most likely won't compensate you for damages either? See [here](https://tinyurl.com/y3x5wp8r): <https://tinyurl.com/y3x5wp8r>

Are you concerned that gubernatorial lock-down orders are serving to hold up the legal liability shield for Mod and PBNT that is afforded to other vaccine companies (since 1986), but as gene therapy (modifiers) their advertisement of them being vaccines is false and their own research does not offer the help they proclaim? **Why should they be immune to liability.** See more [here](https://tinyurl.com/y3adkq8k): <https://tinyurl.com/y3adkq8k>

Are you concerned with the twenty year explosion in annual advertising expenses by pharmaceutical companies and more so, "Globally, **every country except** the US and New Zealand has outlawed drug ads targeted to consumers?" See [here](https://tinyurl.com/1tqndb96): <https://tinyurl.com/1tqndb96>

Are you concerned that Christian pastors are now being recruited to push the Covid-19 vaccination? See [here](https://tinyurl.com/m2toe3cu): <https://tinyurl.com/m2toe3cu>

Mod's and PBNT's vaccines may be helpful for some, possibly in the short term. But are you concerned when molecular biologist and immunologist, Professor Dolores Cahill of Ireland says that it is very possible that people could start dying a few months after they receive their Moderna vaccination? See her video [here](https://tinyurl.com/y3adkq8k):

<https://tinyurl.com/yyeqqdtn>

Are you concerned that on January 18, 2021, California's top epidemiologist warned health providers to delay using a batch of the Moderna COVID-19 vaccine after a "higher-than-usual number of possible severe allergic reactions" were reported at a Southern California vaccination clinic? See [here](https://tinyurl.com/y5ymd7d7): <https://tinyurl.com/y5ymd7d7>

Are you concerned that the CDC is posting weird material using horror fiction as a model to seriously warn, "...that a zombie apocalypse could happen. In such a scenario zombies would take over entire countries, roaming city streets eating anything living that got in their way." And the CDC questions, "So what do you need to do before zombies...or pandemics actually happen?" Could this be a Covid-vaccine induced pandemic the CDC is referring to? See more [here](https://tinyurl.com/3vqg6eme): <https://tinyurl.com/3vqg6eme>

Might you want to wait before you get vaccinated? Might you consider other options to combat Covid if you contract it? Or even better, a safe alternative to prevent you from contracting it in the first place?

Here's one option. January 14, 2021, the National Institutes of Health (NIH) released their update on considering adding **Ivermectin** to their Covid-19 protocols. (Yes cattlemen, that same Ivermectin.) They say more studies are needed but based on the first review **the NIH no longer opposes its use for Covid**. After all, the discoverer of Ivermectin in 1975 was awarded the 2015 Nobel Prize in Medicine, given its global impact in reducing onchocerciasis (river blindness), lymphatic filariasis, and scabies in endemic areas of central Africa, Latin America, India and Southeast Asia. It has since been included on the WHO's List of Essential Medicines with now over 4 billion doses administered. The NIH's recent report said,

Reports from in vitro (i.e test tubes) studies suggest that ivermectin acts by inhibiting the host importin alfa/beta-1 nuclear transport proteins, which are part of a key intracellular transport process that viruses hijack to enhance infection by suppressing the host antiviral response. In addition, ivermectin docking in vitro may interfere with the attachment of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) spike protein to the human cell membrane....Ivermectin has been shown to inhibit the replication of SARS-CoV-2 in cell culture....Ivermectin demonstrates potential anti-inflammatory properties in some in vitro studies, properties which have been postulated to be beneficial in the treatment of COVID-19.

See more on the NIH's new position on Ivermectin [here](https://tinyurl.com/y3s4cj8q): <https://tinyurl.com/y3s4cj8q>

Dr. Pierre Cory (University of Wisconsin) and Dr. Paul Marik of the **Frontline Covid-19 Critical Care Alliance (FCCC)**, doctors treating Covid-19 patients, are finding great success prescribing Ivermectin. "Ivermectin is one of the world's safest, cheapest and most widely available drugs." noted Dr. Kory, President of the FCCC Alliance on their Facebook page. "The studies we presented to the NIH revealed high levels of statistical significance showing large magnitude benefit in transmission rates, need for hospitalization, and death. What's more, the totality of trials data supporting Ivermectin is without precedent." Also, check their FAQ page on Ivermectin [here](https://tinyurl.com/yyo5jepc): <https://tinyurl.com/yyo5jepc>

Dr. David L. Chesler, M.D. oversees healthcare for seven different **nursing homes and assisted living facilities** here in the U.S. He has had excellent response to the use of Ivermectin with the residents and staff. He has seen a far higher recovery rate than normal in two facilities where they all used Ivermectin. With 144 positive cases of Covid-19 he only lost two of his patients in those two facilities after treating them with Ivermectin. He had similar results in the other five facilities. Listen to his interview [here](https://tinyurl.com/kdw4r9r2): <https://tinyurl.com/kdw4r9r2>

FCCC has developed an entirely new set of preventative protocols as an alternative to getting vaccinated. One can find them [here](https://tinyurl.com/16gx3qvi): <https://tinyurl.com/16gx3qvi>

We know of a Sanford Physician's Assistant and an independent Nurse Practitioner in this region who are quietly prescribing Ivermectin and we know of plenty more individuals who are taking Ivermectin as a preventative, on their own. Others we've heard from take it after getting Covid-19 and one thing we often hear is that within 24 to 48 after their first dose Covid-19 is gone. But candidly, they are frightened to come forward as so much of medical care has become politicized.

Ask your doctor, the CEO or Chief of the Medical staff of your local hospital if they are, or will soon add Ivermectin or the FCCC Alliance's new protocols. Support them all you can because they will have to face the reality and responsibility of having ignored something as simple and as easy to remedy Covid-19 as Ivermectin for the last year, to the great harm and even deaths of some under their care.

No one in our organization is trained in medicine and nor are we giving medical advice. Please weigh these factors for yourself and visit with your physician (especially the ones not employed by large medical corporations) about these matters.
